## Quattro Contracting (Pen) Ltd - Driveway Resin System

Using our unique driveway resin system your driveway is then covered with your choice of natural stone.

This natural stone system can be applied to an existing concrete or tarmac driveway.

All works are undertaken by our fully trained professional team.

### Resin Bonded System

The Resin Bonded Aggregate system uses a coloured resin applied to Concrete & Tarmac to hold an aggregate. In appearance it is like a loose aggregate but without the problems of shifting stone. It's very durable. As well as paths and drives this system can provide a friction finish for disabled ramps.

### Resin Bound System

This system involves encapsulating all of the aggregate within the resin then applying it to between 15-18mm in depth with no loose aggregate remaining.

- Available in a wide range of colours
- Slip resistant
- Self draining
- Wheelchair & Pushchair friendly
- Crack and Frost resistant
- Oil & stain resistant
- Durable & UV stable
- Resin bound gravel is water permeable

Where these systems are used:-

- Domestic Driveways & Paths
- Landscape scheme's
- Disabled Ramps
- Tree Pits
- Heritage Sites
